

Industry Working Group

Robbie Henes & Paul Herrman

Issues:

1. Agencies don't know what producers have available
 - a. Need a yearly system to update relevant people/agencies about availability; especially "boutique" low volume accessions – PVG
 - b. Also need to share relevant specs on each species
2. Plant materials being studied need to be evaluated for seed production, harvest, cleaning establishment – so it has potential for growers.
3. IDIQ Process
 - a. Communicate to all parties
 - b. Continued market for product after IDIQ terms are met
4. Inconsistent direction and demand from Agencies
5. Lack of registered pesticides
6. Documents that are released from research need to have a lay-person component.
 - a. Boil it down to key points that give us the relevant data. Especially for potential species grow-out
7. Assure that producers are at the table

Recommendations:

1. Pesticide Regulation – Help to establish 3rd party labeling (Corey Rensom – resource. USU Forb pesticide research grant via Nancy Shaw)
 - a. Need Info
 - b. Need Priorities
 - c. Need Willing Growers/Agencies
 - d. Need Researchers
 - e. Need \$\$
2. Have one entry point/source of all this information (NRCS?)
